☐	Bone pain associated with anaemia and a raised ESR
☐	Serum Paraprotein (not polyclonal) >10g/L or Bence-Jones protein
	With C-calcium raised, Renal Impairment, Anaemia or Bone lesions (if paraprotein with no CRAB likely to be MGUS – routine referral) Results Hb Test Result ESR
☐	Bone X-Rays reported as being suggestive of myeloma
☐	Associated Symptoms not due to infection, inflammation or non-haemopoietic malignancy – drenching night sweats, weight loss, pruritus, shortness of breath, fever >38 °C

Investigations done (Please tick boxes as appropriate and insert dates taken)			
FBC and differential	☐	Bone Profile	☐
ESR	☐	Immunoglobins/ electrophoresis/ serum free light chains	☐
General Biochemistry profile	☐	Lactate dehydrogenase	☐
Liver profile	☐	Radiology	☐
History of any previous cancer / significant co-morbidities / relevant medication			

☐ I confirm that I have discussed the possibility that the diagnosis may be cancer and they may wish to take a family member or significant other to the initial appointment.

☐ I confirm that the patient is available to attend outpatients within the next 14 days

If patient is not available for the next 2 weeks, and aware of nature of referral, consider deferring the referral and seeing the patient again to reassess symptoms
