Important Referrer Information

Reverse of DXA Scan Referral Form

Duties of the referrer under IR(ME)R

The Bone Densitometry Department at the Royal Wolverhampton NHS Trust operates in accordance with the requirements of the Ionising Radiation (Medical Exposure) Regulations [IR(ME)R].

Therefore, your attention is drawn to the following points:

Referrals:

- Radiological investigations will only be undertaken upon receipt of a request signed and dated by a registered medical practitioner
- All requests must have adequate information to allow unique identification of the patient
- All requests must have adequate clinical information to justify
- All requests must be marked with the referrer's full name, title, GMC number and contact details
- Only a CNS named on protocol following specific training are entitled to refer

Clinical Justification of Requests:

Under IR(ME)R regulations, all requests must be justified by the entitled IR(ME)R practitioner for the department to ensure there is a net benefit from the examination to the patients. Referrals may be authorised by entitled operators, providing the reason for referral meets the criteria, specified by the IR(ME)R practitioner, in the DXA authorisation protocol

Useful Resources

Reporting

The Bone Densitometry Team aims to send DXA reports back to the referrer within 4 weeks of the DXA scan appointment. DXA report recommendations are based on the information provided on the referral form, BMD results, and information obtained through an osteoporosis assessment, carried out during the appointment. Incorrect information or omission of relevant information on the referral form may result in suboptimal or inappropriate patient management recommendations. The DXA report is intended to be used for guidance and the final decision regarding patient management lies with the referring healthcare professional.
