GP Name (if different to referrer)	Registered GP Full Name		
GP Address	Organisation Name Organisation Full Address (single line)	Tel No:	Organisation Telephone Number
Post Code	Organisation Postcode	Email:	Organisation E-mail Address

Reason for Referral: (please choose **one** from the following three options)

☐ **1. Faltering Growth in the preceding 12 months** - Defined as meeting NICE Classification threshold:

- ☐ A fall across 1 or more weight centiles, if birth weight is below the 9th centile
- ☐ A fall across 2 or more weight centiles, if birth weight is between the 9th and 91st centiles
- ☐ A fall across 3 or more weight centile spaces, if birth weight was above the 91st centile
- ☐ When current weight is below the 2nd centile for age, not dependent on birth weight
- ☐ If the BMI is below the 0.4th centile

☐ **2. Cow's Milk Protein Allergy**

Please confirm that you have completed steps 1 to 4.

Prior to referral to Dietetics clinicians **MUST** follow the Milk Allergy In Primary Care (IMAP) guidance

<https://gpifn.org.uk/imap/>:

Step 1a change formula to hydrolysed or remove milk from mothers' diet if breast feeding. **Please follow Appropriate Prescribing of Specialist Infant Formulae in Staffordshire 2023.** (Note - there should be some symptom resolution at 2 weeks however this may take 6 weeks to fully resolve).

Step 1b if symptoms are severe initially or only partially resolved after 6 weeks with hydrolysed try amino acid formula

Step 2 challenge with normal diet/formula

Step 3 signpost parent/carer to local health visitor baby drop-in clinics for regular measurements.

Step 4 review patient at 4 weeks to review symptoms and measurements

Note: If symptoms resolved (and return with challenge) then direct parents to webinars for cow's milk allergy, advise to introduce alternatives to milk in weaning diet, milk ladder from 10 months and stop formula at 1 year. Should be on 300mls of full fat cow's milk or fortified plant-based alternative and healthy start vitamins from 1 year. **Information available here:** [Dietetics \(Children\) :: Midlands Partnership University NHS Foundation Trust](#)

Refer: Under 1's on a hydrolysed or amino acid formula and/or on milk free diet for longer than 4 weeks still displaying one or more of the following:

- continued poor weight gain
- screaming, inconsolable despite hydrolysed formula and amino acid formula
- continued symptoms affecting stools - diarrhoea, mucus, blood despite diet/formula change
- unresolved or difficult to treat reflux
-

Following completion of the above four steps, what symptoms persist?

☐ **3. Paediatric Restricted Diet (Deficiency Identified)**

Extreme restricted diet where **limited to less than 5 foods**

Please list current foods

NOTE: a **ONE-OFF** appointment / advice will be offered where a deficiency has been identified.

Please share any other relevant information: (past medical history, diagnosis, medication)

Warning flags: Any other information we need to be aware of:
